

HVAC (Air Conditioning)—Installation, Maintenance, Repairs

New air conditioning system installations, preventative maintenance, equipment replacement, retrofits, and upgrades.
Economizers—use of outside air for cooling, design and installation of environmental control panels.
Heat exchanger and cooling tower—repairs, maintenance, replacements, retrofits.
Environmental system design to resolve heat load issues resulting in capacity expansion projects.
Mechanical and electrical designs for new equipment and facility upgrades.

Emergency Generators—Installation, Maintenance, Repairs

Portable (trailer) and stationary units, prime power and standby systems, generator alarm systems.
On-site refueling of diesel and liquefied petroleum gas “LPG” systems.
Training on generator hook up to site and operation of units.
Periodic preventative maintenance, emergency response and repairs to power systems.
Generate technical documentation that pertains to your company’s specific operations.

Main Utility Service, Distribution, DC Power Plants, Battery Systems

Utility service repairs, feeder upgrades, load evaluations, and sub metering cost analysis.
Electrical distribution systems—panel load audits, load calculations, thermal imaging, electrical fault troubleshooting and repair.
Evaluation of DC power plants to meet expansion requirements, installation of new equipment to meet DC load capacity additions.
Battery maintenance, internal resistance testing, load testing, battery capacity additions, cell and string replacements.
Integration of equipment into existing facilities, cabinets, shelters.

Facilities Maintenance and Repair Issues

Repair of access roads, compound gates, building doors—locks, cabinet enclosures, precast buildings—clearcoat exterior surfaces, cleaning of site interior.
Lighting—interior bulb and ballast replacement, exterior fixtures repair and replacement.
Electrical, mechanical, and ergonomic analysis, optimization of your facilities.
Troubleshooting and repair of building control systems and site alarm systems.

Towers, Antennas, Feedlines—Installation, Modifications, Repairs, Sweep Testing

Provide antenna technician and/or line crews to perform installation of new, or replacement of, antenna and feedlines, and provide sweep test documentation.
Provide emergency response to troubleshoot and repair antenna, feedlines, antenna and dish alignment.

The phone numbers below all have the ability to receive text messaging.
